check if a string is a valid JSON string without using Try/  
Catch and is a JSON object

## V1.2

isJSON(str\*, [passObjects=bool])

\*with passObjects = true can pass a JSON object in  
str, default to false

```
var isJSON = require('is-json');

var good_json = '{"a":"obja","b":  
[0,1,2],"c":{"d":"some object"}}';  
var bad_json = '{"a":"obja""b":  
[0,1,2],"c":{"d":"some object"}}';  
var str_number = '121212';

console.log(isJSON(good_json)); //  
true  
console.log(isJSON(bad_json)); //  
false  
console.log(isJSON(str_number)); //  
false
```

```
// check if an object
var object = {a: 12, b: [1,2,3]};
console.log(isJSON(object, true)); //
// can use isJSON.strict (uses try/
catch) if wants something more robust
console.log(isJSON.strict('{\n "config":
123,\n "test": "abcde" \n}')); // true
```
