

# toidentifier

*Convert a string of words to a JavaScript identifier*

## Install

This is a [Node.js](#) module available through the [npm registry](#).  
Installation is done using the [npm install command](#):

## Example

# API

This CommonsJS module exports a single default function: `toIdentifier`.

## `toIdentifier(string)`

Given a string as the argument, it will be transformed according to the following rules and the new string will be returned:

- 1. Split into words separated by space characters (0x20).
- 2. Upper case the first character of each word.
- 3. Join the words together with no separator.
- 4. Remove all non-word ( [0-9a-z\_] ) characters.
