

Tests

```
npm run test
```

- We use the [ava JavaScript test runner \(Assertions documentation\)](#)

Changelog

- v2.0.0 bumps Node.js minimum to 18.

This is bundled with `@11ty/eleventy` (and you do not need to install it separately) in Eleventy v2.0.

Installation

- [NPM v2.0.8](#)
- [Link on GitHub](#)
- [Link on NPM](#)
- [Support Link on Open Collective](#)
- [Follow us on Twitter \(@Eleventy\)](#)
- [Please star Eleventy on GitHub!](#)

← Documentation

A minimal, modern, generic, hot-reloading local web server to help web developers.

Eleventy Dev Server now also includes a CLI. The CLI is for standalone (non-Eleventy) use only: separate installation is unnecessary if you're using this server with `@11ty/eleventy`.
 npm install `-g` `@11ty/eleventy-dev-server`
 # Alternatively, install locally into
 your project
 npm install `-g` `@11ty/eleventy-dev-server`
 # Alternatively, install locally into

CLI

```
# Serve the current directory
# Serve a different subdirectory (also
# aliased as --input)
# Serve a different directory (also
# aliased as --input)
# Serve the current directory
# Serve @11ty/eleventy-dev-server
# Serve @11ty/eleventy-dev-server --
# Disable the `domdiff` feature
# Full command list in the Help
# Domdiff =false
```
