@11ty/lodash-custom

Eleventy uses 3 small `lodash` functions:

- [get](#)
- [set](#)
- [chunk](#)

Why?

1. The top level `lodash` package includes all of `lodash` and is a hefty 5 MB.

2. Using the individual, modularized `lodash.get`, `lodash.set`, `lodash.chunk` packages are a much smaller 106 KB but do contain duplicated code. More problematically, these are not being maintained/updated with the newest versions of `lodash`.

This package creates one focused custom dependency using the tools that `lodash` provides to do custom builds ([lodash-cli](#)) for these three `lodash` functions with updated versions of `lodash`.
