slash `build` `unknown`

Convert Windows backslash paths to slash paths:
`foo\\bar` ➜ `foo/bar`

[Forward-slash paths can be used in Windows](#) as long as they're not extended-length paths and don't contain any non-ascii characters.

This was created since the `path` methods in Node.js outputs \\ paths on Windows.

Install

```
$ npm install slash
```

Usage

```javascript
const path = require('path');
const slash = require('slash');

const string = path.join('foo', 'bar');
// Unix    => foo/bar
// Windows => foo\\bar
```

```
slash(string);
// Unix    => foo/bar
// Windows => foo/bar
```

API

slash(path)

Type: `string`

Accepts a Windows backslash path and returns a path with forward slashes.
