

Personal Website (11ty + Markdown)

This is a static website built with [Eleventy \(11ty\)](#).
All posts are written in Markdown and rendered into HTML using layouts and collections.

Development

Requirements

- [Node.js](#) (v18+ recommended)
- npm (comes with Node)

Install dependencies

```
npm install
```

Run locally

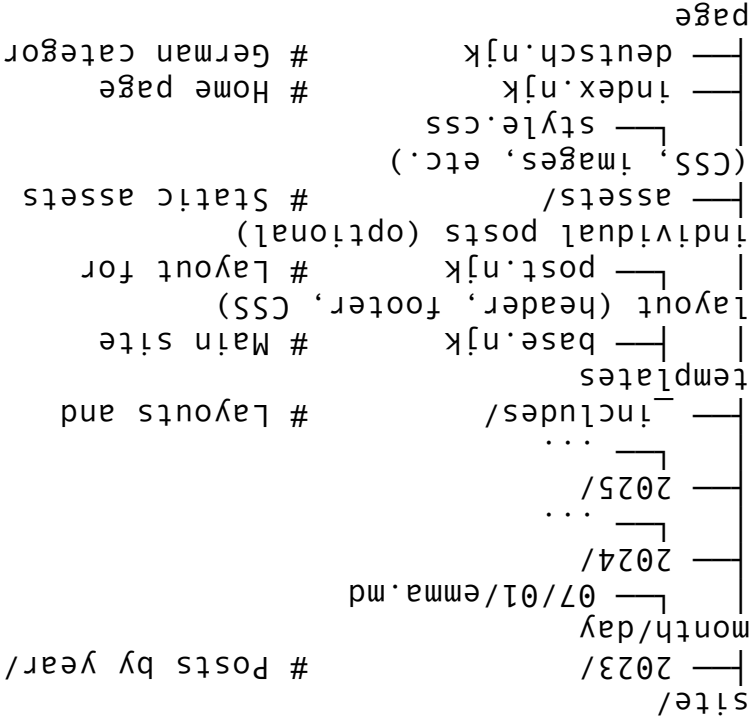

Start a dev server with live reload:

```
npx @11ty/eleventy --serve
```

The site will be available at:

👉 <http://localhost:8081/>

Project Structure

Tips

- Default layout for posts is `_includes/base.njk`, configured in `.eleventy.js`.
- To change how posts render, create `_includes/post.njk` and set:

```
layout: post
```

in a post's front matter.

- Use Google Fonts by editing `assets/style.css`.
- Add new navigation links in `_includes/base.njk`.

👉 Happy writing!

```
|— espanol.njk      # Spanish
category page
|— contact.njk     # Contact page
|— impressum.njk   # Impressum
(footer-only link)
|— .eleventy.js    # Eleventy config
|— package.json
```

Adding Content

New Post

1. Create a new folder path under `YEAR/MONTH/DAY/` (e.g. `2025/09/07/`).
2. Add a Markdown file:

```
---
title: My New Article
date: 2025-09-07T10:00:00.000Z
featuredImage: assets/my-photo.webp
metadata:
  categories:
    - kurzgeschichten
  tags:
    - fiction
    - ai
---
```

Your content goes here. Write in Markdown!

3. (Optional) Add images in the same folder:

2025/09/07/assets/my-photo.webp

and reference it with:

! [Alt text] (assets/my-photo.webp)

Posts are automatically picked up in collections, posts and sorted newest → oldest.

Category filters (deutsch, espanol) depend on the metadata.categories front matter.

Styling

- Main stylesheet: assets/style.css
- Linked from base.njk:

```
<link rel="stylesheet" href="/assets/style.css">
```

- Global theme variables are defined in :root inside CSS.

4

Special Pages

- **Home (/):** Shows featured + recent posts + latest German/Spanish post.
- **Deutsch (/deutsch/):** Lists posts tagged with kurzgeschichten.
- **Espanol (/espanol/):** Lists posts tagged with cuentas nuevos.
- **Contact (/contact/):** Contact info.
- **Impressum (/impressum/):** Legal page, linked only in the footer.

Build & Deploy

Build static output to _site/:

npm @11ty/eleventy

Contents of _site/ can be deployed anywhere (e.g. GitHub Pages, Netlify, Vercel).
