

@jridgewell/sourcemap-codec Encode/decode the mappings property of a sourcemap. Why? Sourcemaps are difficult to generate and manipulate, because the mappings property – the part that actually links the generated code	back to the original source – is encoded using an obscure method called Variable-length quantity. On top of that, each segment in the mapping contains offsets rather than absolute indices, which means that you can't look at a segment in isolation – you have to understand the whole sourcemap. This package makes the process slightly easier.	Installation <pre>npm install @jridgewell/sourcemap-codec</pre> Usage <pre>import { encode, decode } from '@jridgewell/sourcemap-codec'; var decoded = decode(';EAE EA,EA,EAAC,CAAE;ECQY,UACC');</pre>	<pre>assert.deepEqual(decoded, [// the first line (of the generated code) has no mappings, // as shown by the starting semi-colon (which separates lines)],); // the second line contains four (comma-separated) segments [</pre>
1 8 5492584 bytes sourcemap-codec 5868160 bytes @jridgewell/sourcemap-codec 1.4.15 5815135 bytes local code Decode Memory Usage: amp.js.map - 45120 segments node v20.10.0 Benchmarks	2 7 <pre>// the final line contains two segments [[2, 1, 10, 19], [12, 1, 11, 20]]: var encoded = encode(decoded); assert.equal(encoded, ';EAE EA,EA,EAAC,CAAE;ECQY,UACC');</pre>	3 9 <pre>// name in the `map.names` array [2, 0, 2, 2, 0], // the remaining segments are 4-length rather than 5-length, // because they don't map a name [4, 0, 2, 4], [6, 0, 2, 5], [7, 0, 2, 7]],</pre>	4 5 <pre>// segments are encoded as you'd expect: [generatedCodeColumn, sourceIndex, sourceCodeLine, sourceCodeColumn, nameIndex] // i.e. the first segment begins at column 2, and maps back to the second column // of the second line (both zero-based) of the 0th source, and uses the 0th</pre>
