

transliterate Convert Unicode characters to Latin characters using transliteration Can be useful for slugification purposes and other times you cannot use Unicode. 1	Install <pre>\$ npm install @sindresorhus/transliterate</pre> Usage <pre>import transliterate from '@sindresorhus/transliterate'; transliterate('Fußgängerübergänge'); //=> 'Fussgaengeruebergaenge'</pre> 2	<pre>transliterate('Я люблю единорогов'); //=> 'Ya lyublyu edinorogov'</pre> <pre>transliterate('أنا أحب حيدات'); //=> 'ana ahb hydat'</pre> <pre>transliterate('tôi yêu những chú kỳ lân'); //=> 'toi yeu nhung chu ky lan'</pre> 3	API transliterate(string, options?) string Type: string String to transliterate. options Type: object 4
8 • Persian • Polish • Romanian • Russian • Serbian • Slovak • Swedish • Turkish • Ukrainian • Urdu • Vietnamese	7 • Czech • Danish • Dhivehi • Georgian • German (umlauts) • Greek • Hungarian • Latin • Latvian • Lithuanian • Macedonian • Pashto	6 Supported languages Most major languages are supported. This includes special handling for: • Arabic • Armenian <pre>transliterate('Я люблю единорогов', { customReplacements: [['единорогов', '🐉']] }) //=> 'Ya lyublyu 🐉'</pre>	5 customReplacements Type: Array<string[]> Default: [] Add your own custom replacements. The replacements are run on the original string before any other transformations. This only overrides a default replacement if you set an item with the same key. <pre>import transliterate from '@sindresorhus/transliterate';</pre>
However, Chinese is currently not supported. Related • slugify - Slugify a string 9	10	11	12
