

8.15.0 (2025-06-08) New features Support using and await using syntax. The AnyNode type is now defined in such a way that plugins can extend it. 1	Bug fixes Fix an issue where the bigint property of literal nodes for non-decimal bigints had the wrong format. The acorn CLI tool no longer crashes when emitting a tree that contains a bigint. 2	8.14.1 (2025-03-05) Bug fixes Fix an issue where await expressions in class field initializers were inappropriately allowed. Properly allow await inside an async arrow function inside a class field initializer. Mention the source file name in syntax error messages when given. 3	Properly add an empty attributes property to every form of ExportNamedDeclaration. 8.14.0 (2024-10-27) New features Support ES2025 import attributes. Support ES2025 RegExp modifiers. 4
8 Fix a bug where some invalid delete expressions were let through when the operand was parenthesized and preserveParens was enabled. Properly normalize line endings in raw strings of invalid template tokens. Properly track line numbers for escaped newlines in strings. Fix a bug that broke line number accounting after a template literal with invalid escape sequences. 8	7 Bug fixes Include VariableDeclarator in the AnyNode type so that walker objects can refer to it without getting a type error. Properly raise a parse error for invalid for/of statements using async as binding name. Properly recognize "use strict" when preceded by a string with an escaped newline. Mark the Parser constructor as protected, not private, so plugins can extend it without type errors. 7	6 Bug fixes 8.12.1 (2024-07-03) Bug fixes Fix a regression that caused Acorn to no longer run on Node versions < 8.10. 8.12.0 (2024-06-14) New features Support ES2025 duplicate capture group names in regular expressions. 6	5 Bug fixes 8.13.0 (2024-10-16) New features Support some missing Unicode properties. Upgrade to Unicode 16.0. 5
8.11.3 (2023-12-29) Bug fixes Add Function and Class to the AggregateType type, so that they can be used in walkers without raising a type error. Make sure onToken get an import keyword token when parsing import.meta. Fix a bug where .loc.start could be undefined for new.target meta nodes. 6	8.11.2 (2023-10-27) Bug fixes Fix a bug that caused regular expressions after colon tokens to not be properly tokenized in some circumstances. 10	8.11.1 (2023-10-26) Bug fixes Fix a regression where onToken would receive 'name' tokens for 'new' keyword tokens. 11	8.11.0 (2023-10-26) Bug fixes Fix an issue where tokenizing (without parsing) an object literal with a property named class or function could, in some circumstance, put the tokenizer into an invalid state. Fix an issue where a slash after a call to a property named the same as some keywords would be tokenized as a regular expression. 12
8.8.1 (2022-10-24) Bug fixes Make type for Comment compatible with estree types. 8.8.0 (2022-07-21) Bug fixes Allow parentheses around spread args in destructuring object assignment. 16	8.8.2 (2023-01-23) Bug fixes Fix a bug that caused allowHashBang to be set to false when not provided, even with ECMAScript version >= 14. Fix an exception when passing no option object to parse or new Parser. Fix incorrect parse error on if (0) let\n[astral identifier char]. 15	8.9.0 (2023-06-16) Bug fixes Forbid dynamic import after new, even when part of a member expression. 8.9.0 (2023-06-16) New features Add Unicode properties for ES2023. Add support for the v flag to regular expressions. 14	8.10.0 (2023-07-05) New features Upgrade to Unicode 15.1. Use a set of new, much more precise, TypeScript types. Add a checkPrivateFields option that disables strict checking of private property use. 13

Fix an issue where the tree contained directive properties in when parsing with a language version that doesn't support them. New features Support hashbang comments by default in ECMAScript 2023 and later.	8.7.1 (2021-04-26) Bug fixes Stop handling "use strict" directives in ECMAScript versions before 5. Fix an issue where duplicate quoted export names in export * syntax were incorrectly checked. Add missing type for tokTypes.	8.7.0 (2021-12-27) New features Support quoted export names. Upgrade to Unicode 14. Add support for Unicode 13 properties in regular expressions.	Bug fixes Use a loop to find line breaks, because the existing regexp search would overrun the end of the searched range and waste a lot of time in minified code. 8.6.0 (2021-11-18) Bug fixes Fix a bug where an object literal with multiple __proto__ properties would
17 24 Fix a bug where allowAwaitOutsideFunction would allow await in class field initializers, and setting ecmaversion to 13 or higher would allow top-level await in non-module sources. Bug fixes 8.4.1 (2021-06-24)	18 23 Fix wrong end locations stored on SequenceExpression nodes. Implement restriction that for/of loop LHS can't start with let. New features Add support for ES2022 class static blocks. Allow multiple input files to be passed to the CLI tool.	19 22 Improve context-dependent tokenization in a number of corner cases. Fix location tracking after a 0x2028 or 0x2029 character in a string literal (which before did not increase the line number). Fix an issue where arrow function bodies in for loop context would inappropriately consume in operators.	20 21 New features Support class private fields with the in operator. Incorrectly be accepted if a later property value held an assignment.
8.4.0 (2021-06-11) New features A new option, allowSuperOutsideMethod, can be used to suppress the error when super is used in the wrong context.	8.3.0 (2021-05-31) New features Default allowAwaitOutsideFunction to true for ECMAScript 2022 an higher. Add support for the d (indices) regexp flag.	8.2.4 (2021-05-04) Bug fixes Fix spec conformity in corner case `for await (async of ...)`. 8.2.3 (2021-05-04) Bug fixes Fix an issue where the library couldn't parse `for (async of ...)`.	Fix a bug in UTF-16 decoding that would read characters incorrectly in some circumstances. 8.2.2 (2021-04-29) Bug fixes Fix a bug where a class field initialized to an async arrow function wouldn't allow await inside it. Same issue existed for generator arrow functions with yield.
25 32 Adjust package.json to work with Node 12.16.0 and 13.0-13.6. Bug fixes 8.0.5 (2021-01-25) Make allowImportExportAnywhere also apply to import.meta.	26 31 Fix a spurious error in nested destructuring arrays. Bug fixes 8.1.0 (2021-03-09) New features Expose allowAwaitOutsideFunction in CLI interface.	27 30 New features Add support for ES2022 class fields and private methods. 8.1.1 (2021-04-12) Various Stop shipping source maps in the NPM package.	28 29 Fix a regression introduced in 8.2.0 where static or async class methods with keyword names fail to parse.

8.0.4 (2020-10-05) Bug fixes Make <code>await x ** y</code> an error, following the spec. Fix potentially exponential regular expression. 33	8.0.3 (2020-10-02) Bug fixes Fix a wasteful loop during Parser creation when setting <code>ecmaVersion</code> to "latest". 34	Fix another regexp/division tokenizer issue. 8.0.1 (2020-08-12) Bug fixes Provide the correct value in the <code>version</code> export. 35	8.0.0 (2020-08-12) Bug fixes Disallow expressions like <code>(a = b) = c</code>. Make non-octal escape sequences a syntax error in strict mode. New features The package can now be loaded directly as an ECMAScript module in node 13+. 36
7.3.0 (2020-06-11) Bug fixes Fix a bug that caused parsing of object patterns with a property named <code>set</code> that had a default value to fail. New features Add support for optional chaining (<code>?.</code>). 40	7.3.1 (2020-06-11) Bug fixes Make the string in the <code>version</code> export match the actual library version. 39	7.4.0 (2020-08-03) New features Add support for logical assignment operators. Add support for numeric separators. 38	Breaking changes The <code>ecmaVersion</code> option is now required. For the moment, omitting it will still work with a warning, but that will change in a future release. Some changes to method signatures that may be used by plugins. 37
7.2.0 (2020-05-09) Bug fixes Fix precedence issue in parsing of async arrow functions. New features Add support for nullish coalescing. Add support for <code>import.meta</code>. Support <code>export * as ...</code> syntax. 41	6.4.1 (2020-03-09) Bug fixes Upgrade to Unicode 13. More carefully check for valid UTF16 surrogate pairs in regexp validator. 42	7.1.1 (2020-03-01) Bug fixes Treat <code>\8</code> and <code>\9</code> as invalid escapes in template strings. Allow unicode escapes in property names that are keywords. Don't error on an exponential operator expression as argument to <code>await</code>. More carefully check for valid UTF16 surrogate pairs in regexp validator. 43	7.1.0 (2019-09-24) Bug fixes Disallow trailing object literal commas when <code>ecmaVersion</code> is less than 5. New features Add a static <code>acorn</code> property to the Parser class that contains the entire module 44
6.2.0 (2019-07-04) Bug fixes Improve valid assignment checking in <code>for/in</code> and <code>for/of</code> loops. Disallow binding <code>let</code> in patterns. New features Support bigint syntax with <code>ecmaVersion >= 11</code>. 48	6.2.1 (2019-07-21) Bug fixes Fix bug causing Acorn to treat some characters as identifier characters that shouldn't be treated as such. Fix issue where setting the <code>allowReserved</code> option to "never" allowed reserved words in some circumstances. 47	6.3.0 (2019-08-12) New features <code>sourceType</code>: "module" can now be used even when <code>ecmaVersion</code> is less than 6, to parse module-style code that otherwise conforms to an older standard. 46	7.0.0 (2019-08-13) Breaking changes Changes the node format for dynamic imports to use the <code>ImportExpression</code> node type, as defined in ESTree. Makes 10 (ES2019) the default value for the <code>ecmaVersion</code> option. 45

Support dynamic import syntax with <code>ecmaVersion >= 11</code>. Upgrade to Unicode version 12. 6.1.1 (2019-02-27) Bug fixes Fix bug that caused parsing default exports of with names to fail. 49	6.1.0 (2019-02-08) Bug fixes Fix scope checking when redefining a var as a lexical binding. New features Split up <code>parseSubscripts</code> to use an internal <code>parseSubscript</code> method to make it easier to extend with plugins. 50	6.0.7 (2019-02-04) Bug fixes Check that exported bindings are defined. Don't treat <code>\u180e</code> as a whitespace character. Check for duplicate parameter names in methods. Don't allow shorthand properties when they are generators or async methods. 51	Forbid binding await in async arrow function's parameter list. 6.0.6 (2019-01-30) Bug fixes The content of class declarations and expressions is now always parsed in strict mode. Don't allow <code>let</code> or <code>const</code> to bind the variable name <code>let</code>. Treat class declarations as lexical. 52
56 Bug fixes Fix bug in tokenizing an expression-less return followed by a function followed by a regular expression. Remove stray symlink in the package tarball. 6.0.3 (2018-11-04)	55 Bug fixes Further improvements to tokenizing regular expressions in corner cases. 6.0.4 (2018-11-05)	54 Bug fixes Fix TypeScript type for <code>Parser.extend</code> and <code>allowAwaitOutsideFunction</code> to options type. Don't treat <code>let</code> as a keyword when the next token is <code>{</code> on the next line. Fix bug that broke checking for parentheses around an object pattern in a destructuring assignment when <code>preserveParens</code> was on. 6.0.5 (2019-01-02)	53 Don't allow a generator function declaration as the sole body of an <code>if</code> or <code>else</code>. Ignore <code>"use strict"</code> when after an empty statement. Allow string line continuations with special line terminator characters. Treat <code>for</code> bodies as part of the <code>for</code> scope when checking for conflicting bindings. Fix bug with parsing <code>yield</code> in a <code>for</code> loop initializer. Implement special cases around scope checking for functions.
6.0.2 (2018-09-26) Bug fixes Fix bug where default expressions could fail to parse inside an object destructuring assignment expression. 6.0.1 (2018-09-14) Bug fixes Fix wrong value in <code>version</code> export. 57	6.0.0 (2018-09-14) Bug fixes Better handle variable-redefinition checks for catch bindings and functions directly under <code>if</code> statements. Forbid <code>new.target</code> in top-level arrow functions. Fix issue with parsing a <code>regex</code> after <code>yield</code> in some contexts. 58	New features The package now comes with TypeScript definitions. Breaking changes The default value of the <code>ecmaVersion</code> option is now 9 (2018). Plugins work differently, and will have to be rewritten to work with this version. 59	The loose parser and walker have been moved into separate packages (<code>acorn-loose</code> and <code>acorn-walk</code>). 5.7.3 (2018-09-10) Bug fixes Fix failure to tokenize <code>regexps</code> after expressions like <code>x.of</code>. Better error message for unterminated template literals. 60
64 Bug fixes A republish of the code in 5.5.1 in an attempt to solve an issue with the file timestamps in the npm package being 0. 5.5.2 (2018-03-08)	63 Bug fixes Allow binding-less catch statements when <code>ECMAVersion >= 10</code>. Add <code>allowAwaitOutsideFunction</code> option for parsing top-level <code>await</code>. 5.5.3 (2018-03-08) Bug fixes A <i>second</i> republish of the code in 5.5.1, this time with <code>yarn</code>, to hopefully get valid timestamps.	62 New features 5.7.0 (2018-06-15) New features Upgraded to Unicode 11. 5.6.0 (2018-05-31) New features Allow <code>U+2028</code> and <code>U+2029</code> in string when <code>ECMAVersion >= 10</code>.	61 Bug fixes 5.7.2 (2018-08-24) Properly handle <code>allowAwaitOutsideFunction</code> in for statements. Treat function declarations at the top level of modules like <code>let</code> bindings. Don't allow async function declarations as the only statement under a label.

5.5.1 (2018-03-06) Bug fixes Fix misleading error message for octal escapes in template strings. 5.5.0 (2018-02-27) New features The identifier character categorization is now based on Unicode version 10.	Acorn will now validate the content of regular expressions, including new ES9 features. 5.4.0 (2018-02-01) Bug fixes Disallow duplicate or escaped flags on regular expressions. Disallow octal escapes in strings in strict mode.	New features Add support for async iteration. Add support for object spread and rest. 5.3.0 (2017-12-28) Bug fixes Fix parsing of floating point literals with leading zeroes in loose mode. Allow duplicate property names in object patterns.	Don't allow static class methods named prototype. Disallow async functions directly under if or else. Parse right-hand-side of for/of as an assignment expression. Stricter parsing of for/in. Don't allow unicode escapes in contextual keywords.
5.1.1 (2017-07-06) Bug fixes Fix problem with disambiguating regexp and division after a class. 5.1.0 (2017-07-05) Bug fixes Fix tokenizing of regexps in an object-desstructuring for/of loop and after yield.	New features Support directive property on directive expression statements. 5.1.2 (2017-09-04) Bug fixes Disable parsing of legacy HTML-style comments in modules. Fix parsing of async methods whose names are keywords.	Bug fixes Fix token context tracking for class and function in property-name position. Make sure <code>**</code> isn't parsed as a valid operator. Allow shorthand properties <code>get</code> and <code>set</code> be followed by default values. Disallow <code>super</code> when not in callee or object position.	New features Parsing class members was factored into smaller methods to allow plugins to hook into it. 5.2.1 (2017-10-30) Bug fixes Fix a token context corruption bug.
Parse zero-prefixed numbers with non-octal digits as decimal. Allow object/array patterns in rest parameters. Don't error when <code>yield</code> is used as a property name. Allow <code>async</code> as a shorthand object property. New features Implement the template literal revision proposal for ES9.	5.0.3 (2017-04-01) Bug fixes Fix spurious duplicate variable definition errors for named functions.	5.0.2 (2017-03-30) Bug fixes A binary operator after a parenthesized arrow expression is no longer incorrectly treated as an error.	5.0.0 (2017-03-28) Bug fixes Raise an error for duplicated lexical bindings. Fix spurious error when an assignment expression occurred after a spread expression. Accept regular expressions after <code>of</code> (in <code>for/of</code>), <code>yield</code> (in a generator), and braced arrow functions.
Bug fixes Fix incorrect error raised for parenthesized simple assignment targets, so that <code>(x) = 1</code> parses again. 4.0.9 (2017-02-06)	Bug fixes Don't expect semicolons after default-exported functions or classes, even when they are expressions. Check for use of <code>'use strict'</code> directives in non-simple parameter functions, even when already in strict mode. 4.0.10 (2017-02-07)	Bug fixes Allow all forms of member expressions to be parenthesized as lvalue. 4.0.11 (2017-02-07)	Breaking changes Parse declarations following <code>export default</code> as declaration nodes, not expressions. This means that class and function declarations nodes can now have <code>null</code> as their <code>id</code>. Allow labels in front of <code>var</code> declarations, even in strict mode. 4.0.11 (2017-02-07)

4.0.8 (2017-02-03) Bug fixes Solve spurious parenthesized pattern errors by temporarily erring on the side of accepting programs that our delayed errors don't handle correctly yet.	4.0.7 (2017-02-02) Bug fixes Accept invalidly rejected code like <code>(x).y = 2</code> again. Don't raise an error when a function <i>inside</i> strict code has a non-simple parameter list.	4.0.6 (2017-02-02) Bug fixes Fix exponential behavior (manifesting itself as a complete hang for even relatively small source files) introduced by the new 'use strict' check.	4.0.5 (2017-02-02) Bug fixes Disallow parenthesized pattern expressions. Allow keywords as export names. Don't allow the <code>async</code> keyword to be parenthesized. Properly raise an error when a keyword contains a character escape. Allow <code>"use strict"</code> to appear after other string literal expressions.
81	82	83	84
88 The default <code>ecmaVersion</code> option value is now 7. Breaking changes 4.0.0 (2016-08-07) Fix false positives in duplicated export name errors. Bug fixes 4.0.1 (2016-08-08)	87 Don't ignore period or 'e' characters after octal numbers. Fix broken parsing for call expressions in default parameter values of arrow functions. Bug fixes 4.0.2 (2016-08-11)	86 Allow regular function declarations inside single-statement if branches in loose mode. Forbid them entirely in strict mode. Properly parse properties named <code>async</code> in ES2017 mode. Fix bug where reserved words were broken in ES2017 mode. Bug fixes 4.0.3 (2016-08-16)	85 Disallow labeled declarations. 4.0.4 (2016-12-19) Bug fixes Fix crash when <code>export</code> was followed by a keyword that can't be exported.
A number of internal method signatures changed, so plugins might need to be updated. Bug fixes The parser now raises errors on duplicated export names. arguments and <code>eval</code> can now be used in shorthand properties. Duplicate parameter names in non-simple argument lists now always produce an error.	New features The <code>ecmaVersion</code> option now also accepts year-style version numbers (2015, etc). Support for <code>async/await</code> syntax when <code>ecmaVersion</code> is <code>>= 8</code>. Support for trailing commas in call expressions when <code>ecmaVersion</code> is <code>>= 8</code>.	3.3.0 (2016-07-25) Bug fixes Fix bug in tokenizing of regexp operator after a function declaration. Fix parser crash when parsing an array pattern with a hole.	New features Implement check against complex argument lists in functions that enable strict mode in ES7. 3.2.0 (2016-06-07) Bug fixes Improve handling of lack of unicode regexp support in host environment.
89	90	91	92
96 The default value of the <code>ecmaVersion</code> option is now 6 (used to be 5). Support for comprehension syntax (which was dropped from the draft spec) has been removed. Breaking changes 3.0.0 (2016-02-10)	95 Fix bug that accidentally made undefined a reserved word when parsing ES7. Fixes 3.0.2 (2016-02-10) Allow update expressions as left-hand-side of the ES7 exponential operator. Fixes 3.0.4 (2016-02-25)	94 Properly tokenize the division operator directly after a function expression. Allow trailing comma in destructuring arrays. Bug fixes 3.1.0 (2016-04-18)	93 Properly reject shorthand properties whose name is a keyword. New features Visitors created with <code>visit</code> make now have their base as <i>prototype</i>, rather than copying properties into a fresh object.

Fixes let and yield are now “contextual keywords”, meaning you can mostly use them as identifiers in ES5 non-strict code. A parenthesized class or function expression after export default is now parsed correctly. 97	New features When ecmaVersion is set to 7, Acorn will parse the exponentiation operator (**). The identifier character ranges are now based on Unicode 8.0.0. Plugins can now override the raiseRecoverable method to override the way non-critical errors are handled. 98	2.7.0 (2016-01-04) Fixes Stop allowing rest parameters in setters. Disallow y rexp flag in ES5. Disallow \00 and \000 escapes in strict mode. Raise an error when an import name is a reserved word. 99	2.6.2 (2015-11-10) Fixes Don’t crash when no options object is passed. 100
101	103 Don't allow rest parameters to be non-identifier patterns. Check for duplicate parameter names in arrow functions.	102 2.5.0 (2015-10-27) Fixes Fix tokenizer support in the command-line tool. Stop allowing new.target outside of functions. Remove legacy guard and guardedhandler properties from try nodes. Stop allowing multiple __proto__ properties on an object literal in strict mode.	101 New features Disallow yield in a parameter default value for a generator. Forbid using a comma after a rest pattern in an array destructuring. Support parsing stdin in command-line tool.
105	106	107	108
112	111	110	109
