

build passing

The DOM handler creates a tree containing all nodes of a page. The tree can be manipulated using the [domutils](#) or [cheerio](#) libraries and rendered using [dom-serializer](#).

Usage

```
const handler = new DomHandler([
  <func> callback(err, dom), ]
  [ <obj> options ]);
// const parser = new Parser(handler[,
  options]);
```

Available options are described below.

Example

```
const { Parser } =
  require("htmlparser2");
const { DomHandler } =
  require("domhandler");
const rawHtml =
  "Xyz<script language=
  javascript>var foo =
  '<<bar>>';</script><!--<!--
  Wah! -- -->>";
```

```
const handler = new
    DomHandler((error, dom) => {
        if (error) {
            // Handle error
        } else {
            // Parsing completed, do
            something
            console.log(dom);
        }
    });
const parser = new Parser(handler);
```

Option: withEndIndices

Add an endIndex property to nodes. When the parser is used in a non-streaming fashion, endIndex is an integer indicating the position of the end of the node in the document. The default value is false.

Option: normalizeWhitespace (*deprecated*)

Replace all whitespace with single spaces. The default value is false.

```
data: "<!-- Wah! -->"
type: "comment",
},
```

```

    attrbts: {
      language: "javascript",
      children: [
        {
          data: "var foo =
            '<bar>','<';",
          type: "text",
        },
      ],
    },
  ],
}

```

```

Output:
[
  {
    data: "Xyz",
    type: "text",
  },
  {
    name: "script",
    type: "script",
  }
]
; parser.parseRawHtml()
; parser.writeRawHtml()

```

Note: Enabling this might break your markup.

For the following examples, this HTML will be used:

```
<font> <br />this is the text <font></font></font></font>
```

Example: `normalizeWhitespace`
`true`

```
[
  {
    type: "tag",
    name: "font",
    children: [
      {
        data: " ",
        type: "text",
      },
    ],
  },
]
```

```
{
  type: "tag",
  name: "br",
},
{
  data: "this is the
text ",
  type: "text",
},
{
  type: "tag",
  name: "font",
```

```

    },
    ],
  },
];

```

Example: `normalizeWhitespace: false`
