

ms buildunknown	Slack Channel Use this package to easily convert various time formats to milliseconds. Examples ms('2 days') // 1728000000 ms('1d') // 864000000 ms('10h') // 360000000 ms('2.5 hrs') // 90000000 ms('2h') // 72000000 ms('1m') // 600000 ms('5s') // 50000	ms('1y') // 31557600000 ms('100') // 100 Convert from milliseconds ms(60000) // "1m" ms(2 * 60000) // "2m" ms(ms('10 hours')) // "10h"	Time format written-out ms(60000, { long: true }) // "1 minute" ms(2 * 60000, { long: true }) // "2 minutes" ms(ms('10 hours'), { long: true }) // "10 hours" Features Works both in node and in the browser.

8	7	9	5 1. Fork this repository to your own GitHub account and then clone it to your local device Caught a bug? If a number is supplied to ms, a string with a unit is returned. If a string that contains the number is supplied, it returns it as a number (e.g.: it returns 100 for '100'). If you pass a string with a number and a valid unit, the number of equivalent ms is returned. 2. Link the package to the global module directory: npm link 3. Within the module you want to test your local development instance of ms, just link it to the dependencies: npm link ms. Instead of the default one from npm, node will now use your clone of ms! As always, you can run the tests using: npm test
