Option Description caseSensitive Treat attributes in sensitive manner for custom HTML	Option Description collapseBooleanAttributes Omit attribute value if value is boolean collapseInlineTagWhitespace Don't leave any space between display elements when collapsed. Must be used in conjunction with collapseWhitespace collapseWhitespace	Option Description conservativeCollapse Always collapse text (never remove it). Must be used in conjunction with collapseWhitespace continueOnError Handle parse errors instead of aborting
Option Description insertTagsGeneratedTags Insert tags generated by HTML parser. Keep the trailing slash on singleton elements. Specify a maximum length. Compress keepClosingSlash maxInLength	Option Description html5 Use direct Unicode characters whenever possible Parse input according to HTML5 specification Array of regexes to ignore comments, when allowed to ignore comments ignoreCustomComments allow to ignore comments ignoreCustomFragments allow to ignore code fragments	Option Description attributeSurroundings allow to support attribute expressions (e.g. {{#if value}} checked="" </>) arraysOfRegexesToIgnoreAttributes allow to support event attributes (e.g. onmouseover) decodeEntities	Option Description arraysOfRegexesToIgnoreAttributeNames allow to support attribute names from (e.g. class) customEventAttributes allow to support custom event attributes customAttributeSurroundings allow to support custom attribute surroundings

loses information about tree being malformed or partial in the beginning. As a result, it can't create a partial/malformed tree at the time of the output. Running benchmarks Benchmarks for minified HTML: cd benchmarks npm install npm run benchmark 29	Running local server npm run serve 30	31	32										
Internal representation of markup in a form of tree (e.g. { tag: "p", attr: "id", children: ["foo"] }) ↓ Transformation of internal representation (e.g. removal of id attribute) ↓ Output of resulting markup (e.g. <p>foo</p>) HTMLMinifier can't know that original markup was only half of the tree; it does its best to try to parse it as a full tree and it 28	Working with invalid markup HTMLMinifier can't work with invalid or partial chunks of markup. This is because it parses markup into a tree structure, then modifies it (removing anything that was specified for removal, ignoring anything that was specified to be ignored, etc.), then it creates a markup out of that tree and returns it. Input markup (e.g. <p id="">foo) ↓ 27	26	Special cases Ignoring chunks of markup If you have chunks of markup you would like preserved, you can wrap them <!-- htmlmin:ignore -->. Minifying JSON-LD You can minify script tags with JSON-LD by setting the option { processScripts: 25	Option Description removeEmptyAttributes Remove all attributes with whitespace-only value matches the Remove all attributes with whitespace-only value matches the removeEmptyElements Remove all elements with empty contents removeOptionalTags Remove attributes that value matches the Remove attributes that value matches the removeRedundantAttributes removeScriptTypeAttributes 21	Option Description removeTypelessAttributes Remove typeless attributes removeStyleLinkTypeAttributes Other type attributes are left in Remove type="text" from style and link attributes removeTagWhitespace Remove space between attributes whenever 22	Option Description sortAttributes Sort attributes by frequency sortClassName Sort class names by frequency trimCustomFragments Trim white space from custom fragments useShortDoctype 23	Option Description sortAttributes Sort attributes by frequency sortClassName Sort class names by frequency trimCustomFragments Trim white space from custom fragments useShortDoctype 23	Option Description minifyJS Minify JavaScript elements and event attributes (uses minifyJS) 17	Option Description minifyCSS Minify CSS in style elements and style attributes (uses minifyCSS) 17	Option Description minifyURLs Minify URLs in various attributes (uses minifyURLs) 18	Option Description preventAttributesEscaping Prevents the escaping of the values of attributes 69	Option Description processConditionalComments Process contents of conditional comments through minifier 69	Option Description processScripts Array of strings corresponding to script elements to be removed through minifier (e.g. text/ng-template/x-handlebars, etc.) 20
