

list-to-array Simple javascript lib for converting a [comma space] delimited string to an array. Trims values so you can use human-friendly lists like 'one, two, three' => ['one', 'two', 'three'] If in array is provided, it is simply returned. If a falsy or non-string value is provided, an empty array is returned.	Won't work with values that contain spaces. Installation npm install list-to-array Works in node.js, iojs or bundle for the browser with browserify or webpack. Usage var listToArray = require('list-to-array');	console.log(listToArray('one, two, three')); // logs ['one','two','three'] License (The MIT License) Copyright (c) 2015 Jed Watson Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files (the 'Software'), to deal in the Software	without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of the Software, and to permit persons to whom the Software is furnished to do so, subject to the following conditions: The above copyright notice and this permission notice shall be included in all copies or substantial portions of the Software.
