

Changelog All notable changes to this project will be documented in this file. The format is based on Keep a Changelog, and this project adheres to Semantic Versioning. 1	[1.0.0] - 2025-08-28 - Runs stable for years now, hence push version to 1.0. No breaking changes to v0.9.0. Added: Now also works as ESM module Removed (dev): (Internal) mocha replaced with node test runner for running tests 2	[0.9.0] - 2025-01-21 Added: Headlines can now be omitted from the table of contents by placing a special HTML comment tag before the headline (fixes #65) Added: Option omitTag can override the default tag <!-- omit from toc --> 3	[0.8.0] - 2024-09-10 Added: Option getTokensText to override how text is extracted from tokens to build headlines and slugs (fixes #61), similar to the function in markdown-it-anchor. [0.7.0] - 2024-09-09 Added: Override the container element ⚠ BREAKING CHANGE: The plugin moved from <i>inline mode</i> to <i>block mode</i> (fixes #62) Changed: Updated tests, readme etc. 4
8 Be aware that the old tests/examples now behave differently when using soft breaks before the markup: <pre>const md = new MarkdownIt(); md.use(markdownItToc, { transformContainerOpen: () => { return '<p>'; }, transformContainerClose: () => { return '</p>'; } });</pre>	7 The TOC now is generated in block mode, which removes the wrapping p tag. Wrapping a div in a p is considered invalid HTML. If you really need a wrapping p-element, you can emulate the old behavior with the new container override functions: <pre><p></p></pre> Output now:	9 Inline mode is now block mode Input: <pre>}, transformContainerClose: () => { return ''; } });</pre> Output before:	5 Removed: Old forceFullToc attribute Override the container element Two new options that accept functions that return HTML to render custom containers (and more elements if necessary): <pre>md.use(markdownItToc, { transformContainerOpen: () => { return '<button>Toggle</button><h3>Table of Contents</h3>'; } });</pre>
Input: # Article Text with soft line break (two spaces) ## Headline Output before: 9	<h1>Article</h1> <p>Text with soft line break (two spaces)
...</p> Output now: <h1>Article</h1> <p>Text with soft line break (two spaces)</p> ... 10	[0.6.0] - 2021-11-12 The TOC generator was rewritten, because the old <i>on-the-fly</i> generator couldn't deal with unexpected order of headings and double-indentations. It is now a three-step process: - Gather all headings in a list. - Turn that list into a nested tree. - Generate HTML code based on the nested tree. Although all tests pass, this release could introduce some breaking changes for you, if you relied on the old way of doing things. 11	Check the test cases to get a better understanding how this plugin handles various cases. Added: Support for markdown-it-attrs (fixes #54) Changed: Respects unexpected nesting order (fixes #55) Changed: Uses anchor targets from existing id attributes (for example, set by markdown-it-attrs or markdown-it-anchor) 12
11	11	14	13 Changed: Now nests list correctly if there is a jump (for example: h2, h2, h4 is now double-indented) Removed: unused tests
