

section-matter			
1 8 --- title: One --- More content. --- Content before the sections. Given the following string: the key for the section. must be followed by a string to be used as	7 var sections = require(''); var result = sections(input, options); // { content: 'Content before sections', sections: [] } See available options. Example With the exception of front-matter, which must be the very first thing in the string, the opening delimiter of all other sections	6 Usage Params input {String Buffer Object}: If input is an object, it's content property must be a string or buffer. {Object}: options {Object}: Returns an object with a content string and an array of sections objects. Example	5 Install Like front-matter, but supports multiple sections in a document. Please consider following this project's author, Jon Schlinkert, and consider starring the project to show your heart and support. Install with npm: \$ npm install --save section-matter
This is the first section. The following code: console.log(sections(input)); Results in: { content: 'Content before the sections.\n\n---\n\nMore content.\n',	10 sections: [{ key: 'one', data: 'title: One', content: '\nThis is the first section.' }]	11 Options options.section_parse Type: function Default: undefined Function to be called on each section after it's parsed from the string. Example Given the following string (foo.md):	12 This is content before the sections. ---one title: First section --- This is section one. ---two title: Second section ---
16 { key: 'section-two', data: { title: 'Second section' }, content: '\nThis is section two. '\n' } }	15 Results in: { content: 'This is content before the sections.\n', sections: [{ key: 'section-one', data: { title: 'First section' }, content: '\nThis is section one. '\n' }] }	14 var options = { section_parse: function(section) { console.log(section) section.key = 'section-' + section.data = yml.safeLoad(section.data); } }; var result = sections(str, options); console.log(result);	13 This is section two. Using the following custom section_parse function: var fs = require('fs'); var path = require('path'); var yaml = require('js-yaml'); var sections = require('section- matter'); var str = fs.readFileSync('foo.md');

options.section_delimiter Type: string Default: --- Delimiter to use as the separator for sections. <i>With the exception of front-matter, which must be the very first thing in the string, the opening delimiter of all other sections must be followed by a string to be used as the key for the section.</i> Example 17	<pre>var input = '~~~\ntitle: bar\n~~~\n\nfoo\n~~~one\ntitle: One\n~~~\nThis is one'; console.log(sections(input, {section_delimiter: '~~~'}));</pre> Results in: <pre>{ content: ' ', sections: [{ key: ' ',</pre> 18	<pre>data: 'title: bar', content: '\nfoo' }, { key: 'one', data: 'title: One', content: 'This is one' }]</pre> 69	About Contributing Pull requests and stars are always welcome.
