

tslib This is a runtime library for TypeScript that contains all of the TypeScript helper functions. This library is primarily used by the <code>--importHelpers</code> flag in TypeScript. When using <code>--importHelpers</code>, a module that uses helper functions like <code>__extends</code> and <code>__assign</code> in the following emitted file: 1	<pre>var __assign = (this && this.__assign) Object.assign function(t) { for (var s, i = 1, n = arguments.length; i < n; i++) { s = arguments[i]; for (var p in s) if (Object.prototype.hasOwnProperty.call p)) t[p] = s[p]; } }</pre> 2	<pre> return t; }; exports.x = {}; exports.y = __assign({}, exports.x); will instead be emitted as something like the following: var tslib_1 = require("tslib"); exports.x = {}; exports.y = tslib_1.__assign({}, exports.x);</pre> 3	Because this can avoid duplicate declarations of things like <code>__extends</code>, <code>__assign</code>, etc., this means delivering users smaller files on average, as well as less runtime overhead. For optimized bundles with TypeScript, you should absolutely consider using <code>tslib</code> and <code>--importHelpers</code>. 4
8 <pre># TypeScript 2.3.2 or earlier jspm install tslib@1.6.1 # TypeScript 3.8.4 or earlier jspm install tslib@v1 # TypeScript 3.9.2 or later jspm install tslib</pre> JSPM	7 <pre># TypeScript 2.3.2 or earlier bower install tslib@1.6.1 # TypeScript 3.8.4 or earlier bower install tslib@v1 # TypeScript 3.9.2 or later bower install tslib</pre> bower	6 <pre># TypeScript 2.3.2 or earlier npm install tslib@1.6.1 yarn # TypeScript 3.9.2 or later yarn add tslib # TypeScript 3.8.4 or earlier yarn add tslib@v1 # TypeScript 2.3.2 or earlier yarn add tslib@1.6.1</pre> yarn	5 <pre># TypeScript 3.8.4 or earlier npm install tslib@v1 # TypeScript 3.9.2 or later npm install tslib npm For the latest stable version, run:</pre> Installing
Usage Set the <code>importHelpers</code> compiler option on the command line: <pre>tsc --importHelpers file.ts</pre> or in your <code>tsconfig.json</code>: <pre>{ "compilerOptions": { "importHelpers": true }</pre> 9	<pre> } } }</pre> For bower and JSPM users You will need to add a paths mapping for <code>tslib</code>, e.g. For Bower users: <pre>{ "compilerOptions": { "module": "amd", "importHelpers": true,</pre> 10	<pre> "baseUrl": "./", "paths": { "tslib" : ["bower_components/tslib/ tslib.d.ts"] } } For JSPM users:</pre> <pre>{ "compilerOptions": {</pre> 11	<pre> "module": "system", "importHelpers": true, "baseUrl": "./", "paths": { "tslib" : ["jspm_packages/ npm/tslib@2.x.y/tslib.d.ts"] } } }</pre> Deployment Choose your new version number 12
16	15 Quick tutorial Programming handbook Homepage Documentation	14 There are many ways to contribute to TypeScript. Submit bugs and help us verify fixes as they are checked in. - Review the source code changes. - Engage with other TypeScript users and developers on StackOverflow. - Join the #typescript discussion on Twitter. Contribute bug fixes. Contribute	13 - Set it in package.json and bower.json - Create a tag: <code>git tag [version]</code> - Push the tag: <code>git push --tags</code> - Create a release in GitHub - Run the publish to npm workflow - Done.
